

ANDERSON GREENWOOD SERIES M5F MULTI-PORT GAUGE VALVES

A 1/4" FNPT x (3) 1/4" FNPT multi-port block and bleed valve for universal use wherever more than one outlet is required

FEATURES

- Metal-to-metal body-to-bonnet seal in constant compression prevents bonnet thread corrosion, eliminates possible tensile breakage and gives a reliable seal point.
- Rolled stem and bonnet threads provide additional strength.
- Dust cover protects stem from lubricant contamination.
- Packing below threads prevents lubricant washout, thread corrosion, process contamination and eliminates galling.
- Replaceable soft seat and can operate in dirty service with repetitive bubble-tight shutoff.
- Easily adjustable PTFE packing decreases replacement downtime and increases valve life.
- Mirror stem finish in the packing area provides smooth operation and extends packing life.
- Safety back seating prevents stem blowout or accidental removal and provides a metal-to-metal secondary stem seal while in the fully open position.
- Straight-through flow path means high flow capacity, bi-directional flow and rodding capabilities.

GENERAL APPLICATION

Typically used as a block valve with multiple port outlets in natural gas applications.

BONNET ASSEMBLY

The M5F features a soft-seated bonnet assembly which has a one-piece rotating stem and plug. The stem threads are rolled and lubricated to prevent galling and reduce operating torque. It is available with a patented PTFE packing gland, which is adjustable in service or with an FKM O-ring and PTFE back-up ring. A protective dust cap is fitted to contain stem lubricant and prevent the influx of contaminants. All bonnets are assembled with a bonnet locking pin to prevent accidental removal while in service.
